

Species and Primary Hybrids

Phal. Purple Martin x Phal. violacea 'Grace Blue' N0856

The search for true blue goes on although it has been very difficult. Maybe this will be the cross that is the breakthrough.
\$25 each

Phal. amabilis 'Hackneau' x Phal. violacea 'Sailfish Blue' N0823

Phal. amabilis is a 2N as is the violacea so we should produce 2N progeny which has been a problem. Our first crosses were made with Phal. amabilis 4N. Let's wish for better with these seedlings.
\$25 each

Phal. amboinensis ('Chin Yo' x Waldhime' AM/AOS)

None of these has bloomed so they are still a surprise. Let's hope for a beautiful surprise.
\$25 each

Phal. amboinensis var. flavum

This is another surprise for us since all we know is the flask was beautiful when we bought it. We are hoping for a true flavum that will produce a blue Phal. Princess Kaiulani.
\$50 each

Phal. bellina ('Deep South' x 'Fifi') N0551

Phal. bellina ('Fifi' x 'Joseph Wu') N0809

Phal. bellina ('Ponkan' AM/AOS x 'Fifi') N0442

Phal. bellina is a true classic species and you can see that 'Fifi' is our best clone. 'Deep South' has more red coloring than any other Phal. bellina that we have. Our line of breeding was produced by Dr. Henry Wallbrunn's 'Marilee' 'Bravo' and 'Ponkan'. 'WOW', which won the Herb Hagar award, came from this line as well.

\$25 each

Phal. Be Tris (Be Glad x equestris)

Adorable small flowers, quite floriferous, is usually in bloom and loves making keikis. Progeny of Phal. Cassandra, an all time favorite.
\$35

Phal. Charm (maculate flava x cornu-cervi 'Joy's green')

We are holding our breath to see this bloom. Should be darling.
\$25

Species and Primary Hybrids

Phal. cochlearis

Word has it that cochlearis is extinct, but not at Orchidview, they love to bloom and have charming lovely flava flowers with brown markings in Cupped form lip, quite unusual

\$25

Phal. (conringiana x cornu-cervi)

This is another cliff-hanger. We are expecting great things from this cross.

\$25

Phal. cornu-cervi var. Chattalaede

Although there are many shades and colors of cornu-cervi 'Chattalaede' the best we have seen. The flower is a smooth red with a totally white lip which makes a very stunning flower.

\$35 each

Phal. Dragon's Fire (venosa x conringiana 'Fernbrook' AM/AOS)

You can expect green with red overlay to dark red mahogany and good form.

\$25

Phal. equestris 'Orchidview's peloric

Quite unique pink flower with multiple lips. This came about from a selfing of equestris Riverbend AM/AOS.

\$25

Phal. equestris 'Riverbend' AM/AOS

This is a 4N that is in bloom most of the year. Has many keikis and is a must for every collector.

\$35

Phal. equestris 'Pink Panther' HCC/AOS

Pure eggshell porcelain pink flowers on a petite plant that gives a bonus of keikis as well.

\$35

Phal. equestris 'Pimlico'

Produces many white mini flowers and the keikis are usually also in bloom. Extremely flat and a delight for your collection. We paid \$75 for the first two plants purchased from Barbara Baldan in 1985

\$35

Phal. equestris 'Summit Blusher' AM/AOS

This is a selfing of 'Riverbend' AM/AOS
Flowers are rose-pink and also makes keikis profusely. This is a Mark Rose equestris from days gone by, really lovely and a pleasure to enjoy.

\$35

Species and Primary Hybrids

- Phal. flornensis ('Tyler' x 'Carol') This is a full round flower which is unusual for a species
\$35
- Phal. gigantea 'Texas Treasure' x Phal. lindenii 'Tejas' AM/AOS
Honestly I snickered when I saw this cross and all I could think of was an elephant and mouse crossed. I was wrong as usual for the flowers are small, the plants are small with beautiful markings and the inflorescence presents the flowers beautifully. The stripes are made by small dots – truly stunning.
\$65 each
- Phal. Green Valley (micholitzii x fimbriata 'Musick' HCC/AOS
Frankly we have not bloomed any of this cross. HP is trying to see what micholitzii can do with clearing the spots on other species – his latest hobby.
\$25 each
- Phal. heiroglyphica 'Orchidview' x self N0920
A selfing of an old timer and a first time offering for us. Quite large flowers with a wonderful fragrance.
\$25 each
- Phal. Kenneth Shubert x Firecracker 'Blue Martin' Another effort to move the blue to another generation.
\$25
- Phal. Kuntrarti rarashati (venosa x equestris) Mini rose to orange colored flowers with keikis, blooms almost all of the time.
\$25
- Phal. lindenii 'Classic' x 'Orchid Classic'
A very hardy cross of an old time favorite as well.
\$25 each
- Phal. Liu's Bright Ruby 'Tina' HCC/AOS x violacea 'Magnificent' N0842
A number of these have bloomed and are simply lovely. I hope to make a page of species and small flowers pictures to accompany this page but I must get the page made first!
\$25 each
- Phal. pallens 'Tejas' AM/AOS
AOS award description
Nineteen flat, star-shaped flowers on five inflorescences, three of which are branched; flowers pale yellow-green with lavender spots and bars; linear lip ivory with bright

Species and Primary Hybrids

yellow side lobes and light amethyst lines on sides of midlobe, fimbriated at apex; column and anther cap ivory; substance firm; texture matte; species native to the Philippines.

Phal. pallens 'Tejas' AM/AOS

\$35

Phal. pulcherrima var. coerulea True blue floriferous plant

\$35

Phal. Sapphire's Galah (Purple Martin x violacea) x violacea 'Grace Blue'

Looking for more blue.

\$35

Phal. sumatrana 'green' x sib.

If there are any sumatrana lovers this is for you. A very unusual green color for these parents.

\$25

Phal. tetraspis x Phal. pantherina var flavum

N0654

I admit that this seems like a useless cross but honestly the flowers are pretty and have a green tone to them. Only bloomed a few but look as if they will be very floriferous.

\$25

Phal. venosa 'Sheila's Bronze' x lindenii 'Classic Profusion'

Another one of those crosses that make you wonder just what the grower was thinking of. Phal. venosa is a very good breeder and will produce beautiful yellow/red flowers, and we all like Phal. lindenii 's perfect stripes on a small delicate flower so why not?

\$25

Phal. venosa x micholitzii Phal. micholitzii has the ability to block colors

so we shall see what happens.

\$25

Phal. violacea 'Blue #2' x Phal. violacea 'Tejas' AM/AOS (magenta)

These are being listed here rather than with the violacea crosses only. Ken Avant made the cross and we are expecting great violaceas either magenta or indigo. 'Blue #2' is the parent of our cross N0154 that was so popular. It was made with Ken's pollen before we had an Indigo.

\$35

Phal. violacea 'Magnificent' x Phal. lueddemanniana 'Woodlawn'

N0851

Species and Primary Hybrids

This is our version of Luedde-violacea and is great. The violacea is from our N0154 cross that had both indigo and magenta genes.
\$35

Phal. virdis

These seedlings came from a friend who knew we needed something new to offer. A first time for us!

\$25

Phal. wilsonii x parishii

For you who enjoy the miniature phals this is the answer. They are growing in their pots and sending roots everywhere. If they are not sold quickly we will have to mount the little things.

\$25
